PROFESSIONAL SUMMARY

Python developer focused on practical automation, API integrations, data workflows, and AI-assisted software development.

I build tools that automate workflows, connect external services, process structured data, and turn ideas into working systems. My experience includes independent development of monitoring and automation tools, multi-service integrations, Telegram-based workflows, LLM-powered processing, and experimental agent-based applications.

I use a specification-driven AI-assisted development process to accelerate implementation while retaining responsibility for requirements, solution design, specification review, validation, debugging, integration, and verification of important functionality.

My programming background spans 20+ years across Pascal, Delphi, C++, MQL4, and Python, with several years focused primarily on Python development and practical automation systems.

CORE SKILLS

Python Development

Python · Automation · Data Processing · Web Data Collection · Workflow Tools

API & Service Integrations

REST APIs · API Documentation · Telegram Bot API · Google Sheets API · Grist · External-Service Integrations

AI & LLM Applications

LLM API Integrations · Multi-Provider LLM Workflows · Agent-Based Pipelines · Task Decomposition · AI-Assisted Development

Development Tools

Git · Docker — basic practical experience with containerizing and running applications

SELECTED PROJECT EXPERIENCE

Independent Python Developer / Automation Engineer

Developed practical software tools and interconnected automation systems for personal projects and real-world workflows.

MyCRM Ecosystem — Python Automation & LLM Workflow System

GitHub: <https://github.com/PsyTaktikScout>

Designed and developed an ecosystem of eight interconnected tools supporting freelance-work monitoring and workflow automation.

Key functionality includes:

- Monitoring and collecting tasks from external sources
- Synchronizing structured data between Grist and Google Sheets
- Processing and archiving workflow data
- Sending notifications and supporting interaction through Telegram
- Evaluating tasks through multi-stage LLM processing pipelines
- Collecting web data through a Chrome MV3 extension
- Supervising and restarting long-running Python processes

The system was developed incrementally around practical workflow requirements and integrates multiple services and specialized tools.

Task Atomizer — Experimental Multi-Agent Task Processing System

GitHub: <https://github.com/PsyTaktikScout/task-atomizer>

Developed an experimental application for transforming broad or ambiguous requests into smaller, actionable tasks.

The project explores:

- Task decomposition and structured planning
- Detection of uncertainty and clarification workflows
- Role-based agent orchestration
- Integration with multiple LLM providers
- Failure handling and provider fallback strategies

Spain Rental Monitor — Independent Python Project

GitHub: <https://github.com/PsyTaktikScout/spain-rental-monitor>

Independently designed and implemented a Python tool for monitoring Spanish rental listings, tracking price changes, and sending Telegram notifications.

This project was developed without AI code-generation tools and demonstrates hands-on experience with Python application logic, web data collection, data tracking, and external-service integration.

DEVELOPMENT APPROACH

- Start by understanding the practical problem and defining expected behavior
- Break complex work into smaller, testable components
- Design the workflow and describe algorithms and requirements before implementation
- Use coding agents to accelerate implementation and reduce repetitive work
- Review generated specifications and investigate unfamiliar technical details
- Validate functionality, identify problems, and refine the implementation
- Use manual verification and targeted tests for important requirements

AI is part of my development workflow, not a replacement for understanding the problem or taking responsibility for the result.

ADDITIONAL INFORMATION

Languages: Ukrainian — Native · Russian — Fluent · English — Limited spoken proficiency; able to work with technical documentation and written materials using translation and AI-assisted tools

Location: Spain

Interests: Python development · Business-process automation · API integrations · Internal tools · Practical AI and LLM applications · Agent-based systems

Portfolio: <https://github.com/PsyTaktikScout>
